  cc determining the presence of or predisposition to a disease associated cowith altered levels of polypeptide. The polypeptides are also useful for cidentifying agents (agonists and antiagonists) that bind to them. Cells cexpressing the proteins are useful for identifying a therapeutic agent (for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising cc the nucleic acids encoding the polypeptides and cells genetically criminessed to express them are also useful for producing the proteins. Cc The proteins are useful in genetic vaccination, testing and cc therapy, and can be used as nutritional supplements. They may be used to immune suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. AAU29510-AAU33304 represent the amino acid cc sequences of novel human secreted proteins of the invention.

           The invention relates to novel isolated human secreted polypeptides (I) and polynucleotides (II). (I) and (II) are useful for treating inflammatory conditions such as arthritis, nephritis, Crohn's disease, ischaemia-reperfusion injury, shock, sepsis, immune responses, and is involved in increasing haematopolesis, stem cell survival, bone growth and remodeling. (I), (II) and modulators of (II) are useful for prophylaxis or treatment of one or more cancers. (II) is also useful for creating transgenic animals useful for studying the in vivo activities of the polypeptide as well as for studying modulators of the polypeptides. (I) induces the proliferation of neural cells and regeneration of nerve and brain tissue and is useful for the treatment of central and peripheral nervous system diseases and neuropathies, such as Alzheimer's,

   This sequence represents a fragment of a secreted human protein encoded by the nucleic acid molecule detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAX04302) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 86 novel genes and their fragments (nucleic acid sequences: AAX04311-X04410; maino acid sequences AAW04311-X04410; which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 86 polynucleotides, based on which tissues they are most highly expressed (see AAX04311 for described research).

  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG1840-ABL16175) and the encoded proteins
  The sequence data for this patent did not form specification, but was obtained in electronic fat ftp.wlpo.int/pub/published_pct_sequences.

  The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, inhibin activity and may be useful in the diagnosis and/or

CC ischaemia-reperfusion injury shock, sepsis, immune responses, and is convolved in increasing haematopolesis, stem cell survival, bone growth can remodeling. (I), (II) and modulators of (II) are useful for comphylaxis or treatment of one or more cancers. (II) is also useful for creating transgenic animals useful for studying the in vivo activities of the polypeptide as well as for studying modulators of the polypeptides. (I) induces the proliferation of neural cells and regeneration of nerve can brain tissue and is useful for the treatment of central and contributes in addition, (I) is involved in chemotactic or chemokinetic sclerosis. In addition, (I) is involved in chemotactic or chemokinetic cactivity, regulation of haematopolesis and is useful for treating myeloid or lymphoid cell disorders, platelet disorders such as thrombocytopenia and for regeneration of bone, cartilage, tendon, ligament and/or nerve tissue growth, and in tissue repair, healing of burns, incisions, culters, for treating osteoporosis, osteoarthritis, bone degenerative constants or reperfusion injury in various tissues, various immune deficiencies and conference combined immunodeficiency (SCID), bacterial or fungal infections, autoimune disorders e.g. multiple sclerosis, in addition, (I) affects biorhythms or circadian cycles of rhythms, catabolism, catabolism, storage or elimination of dietary fat, lipid, protein, carbohydrate, vitamins, minerals, provides analized contents of ther pain reducing effects.
                             analgesic effects or other pain reducing effects, immuneglobulin like activity and can act as an antigen in a vaccine composition to raise an immune response. AAU28020-AAU28395 represent novel human secreted protein amino acid sequences of the invention.

   the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length CDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.

   The present sequence represents human integral membrane protein (IMP). IMP may be administered to a subject to treat disorders associated with abnormal ion transport or membrane conductance as well as a variety of tumours, e.g. haemolytic anaemias and prostate, breast and pancreatic tumours. A vector capable of expressing IMP, or a fragment or a derivative thereof, may also be administered to a subject to treat the haemolytic anaemias and prostate, breast and pancreatic tumours.

                            This sequence represents a secreted human protein encoded by the gene clone detailed in the descriptor line. The gene can be used to generat fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAXV4302) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 86 novel genes and their fragments (nucleic acid sequences: AAXV4301-XV4410; amino acid sequences AAXV8126-W78225) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polynucleotides. Specific uses are described for each of the 86 polynucleotides, based on which tissues they are most highly expressed

   This sequence represents a fragment of a secreted human protein encoded by the nucleic acid molecule detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAXV4302) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 86 novel genes and their fragments (nucleic acid sequences: AAXV4311-XV4410; amino acid sequences AAWV8126-W78225) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polynucleotides. Specific uses are described for each of the 86 polynucleotides, based on which tissues they are most highly expressed in see aaxV4311 for described uses in the new polynucleotides. Specific uses are described for each of the 86 polynucleotides, based on which tissues they are most highly expressed in the new polynucleotides.

   CC ischaemia reperfusion injury, shock, sepsis, immune responses, and is can velocity the involved in increasing haematopolesis, stem cell survival, bone growth can remodeling. (I), (II) and modulators of (II) are useful for growth can remodeling. (I), (II) and modulators of (II) are useful for coreating transgence animals useful for studying the in vivo activities of the polypeptide as well as for studying modulators of the polypeptides. (I) induces the proliferation of neural cells and regeneration of nerve cancers (II) is also useful for the polypeptides. (I) induces the proliferation of neural cells and regeneration of nerve can disease, and an animal suseful for the treatment of central and continuity, regulation of haematopoiesis and is useful for treating myeloid call disorders, platelet disorders such as Alzheimer's, cativity, regulation of haematopoiesis and is useful for treating myeloid call disorders, platelet disorders such as thrombocytopenia and for regeneration of bone, cartilage, tendon, ligament and/or nerve culcers, for treating osteoporosis, osteoarthritis, bone degenerative construction or regeneration and treatment of lung or liver fibrosis, captilage, tendon, ilgament and/or nerve culcers, for treating osteoporosis, osteoarthritis, bone degenerative construction of periodontal disease. Purthemore, (I) is also useful for the periodontal disease, various immune deficiencies and constitution, and treatment of lung or liver fibrosis, captilage, treatment of lung or liver fibrosis, constitution of the periodontal disease, various immune deficiencies and constitutions, such as asthma or other respiratory problems. (I) affects biorhythms or circadian cycles of rhythms, carabolism, anabolism, storage or elimination of constity and can act as an antigen in a vaccine composition to raise an immune response. ANU28020-ANU28395 represent novel human secreted protein amino acid sequences of the invention.

  polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide and cells genetically the nucleic acids encoding the polypeptide vectors comprising the nucleic acids encoding the polypeptide vectors comprising the proteins are useful for producing the proteins. The proteins are useful in genetic vaccination, testing and therapy, and can be used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoissis; and in Co bone, cartilage, tendon and/or nerve tissue growth or regeneration; continue suppression and/or stimulation; as anti-inflammatory agents; and in treatment of leukaemias. ANU29510-AAU33304 represent the amino acid sequences of novel human secreted proteins of the invention.

   by the nucleic acid molecule detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAX04302) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 86 novel genes and their fragments (nucleic acid sequences: AAX04311-X04410; amino acid sequences AAW78126-W78225) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 86 polynucleotides, based on which tissues they are most highly expressed is (see AAX04311 for described uses).

   sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of dentifying compounds which bind to polypeptides in a sample, and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, cell proliferation or cell aliferentiation activities; stem cell growth factor activity; headers of the invention activities; stem cell growth factor activity.
   thrombolytic activities; receptor or ligand activities; or may be involved in oncogenesis, cancer cell proliferation or metastasis. Depending on their biological activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell disorders), chronic inflammatory conditions (e.g., asthma or arthritis), proliferative retinopathy, atherosclerosis, coronary heart disease, arterial ischaemia, bone disorders (e.g., osteoporosis) and abnormal vascular growth. Polypeptides involved with tissue regeneration and repair (or nucleic acids encoding them) may be used to promote wound healing (e.g., of burns, incisions and ulcers), while those with immunomodulatory activities may be used in the treatment of viral, bacterial and fungal infections in addition to immune disorders.
   Polypeptides with growth factor activity may be used in cell cultures to promote cell growth. For example, such polypeptides may be used to manipulate stem cells in culture to give rise to neuroepithelial cells that can be used to augment or replace cells damaged by illness, autoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug screening techniques. The present sequence represents a novel human polypeptide of the invention.
   haematopoiesis regulatory activity; tissue growth activity; immunomodulatory activity; activin- or inhibin-related activities; chemotactic or chemokinetic activities; haemostatic, thrombotic or

The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hammatopoiesis regulating activity, tissue growth factor activity, immnomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

  oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH13742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; AAB9246 to AAH13632 to AAH13633 can be approximately and AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13632 to AAH13633 can be acid sequences.
  Human SLP-2 homologue, SEQ ID NO:2351.

   The present sequence represents human integral membrane protein (IMP). IMP may be administered to a subject to treat disorders associated with abnormal ion transport or membrane conductance as well as a variety of tumours, e.g. haemolytic anaemias and prostate, breast and pancreatic tumours. A vector capable of expressing IMP, or a fragment or a derivative thereof, may also be administered to a subject to treat the haemolytic anaemias and prostate, breast and pancreatic tumours.
   Claim
   DNA encoding human integral membrane protein - useful for recombinant protein, for treatment of anaemia and cancer
  Sequence
  Human secreted protein encoded by gene 35 clone HTXCS21.

                                portion (e.g. AAX04302) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 86 novel genes and their fragments (nucleic acid sequences: AAX04311-X04410; amino'acid sequences AAW78126-W78225) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 86 polynucleotides, based on which tissues they are most highly expressed in the second content of the second content of the 86 polynucleotides.
   New isolated human genes and the secreted polypeptides they encode useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders
   This sequence represents a secreted human protein encoded by the gene clone detailed in the descriptor line. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc
